

Northpower operates and maintains both the electricity distribution and fibre networks in the Whangarei and Kaipara region with more than 60,000 connected customers.

We also provide specialist contracting services to our partners, other network owners and operators, across the North Island of New Zealand.

You will be joining a diverse and inclusive workforce, with opportunity to develop your career.

**Shaun Brown**  
Distribution Engineer, Whangarei

Shaun Brown who works on Northpower's Whangarei Distribution Network is a great example of the adaptability and mobility of our workforce. Shaun started with us in Wellington as a graduate engineer, moving into a project management role before spotting an opportunity to relocate to join our Whangarei network team. With responsibility for development and maintenance of over 6,000km of overhead and underground lines, he's now enjoying working across multiple projects including line builds network upgrades and providing technical design, standards and project delivery across the Northpower Distribution Network. Shaun says

**"As a Distribution Engineer, I make a difference to our customers by making sure the network is built and maintained to a standard that ensures power is delivered to our customers reliably and safely."**

**Raj Singh**  
Network Engineering & Delivery Manager, Whangarei

Raj Singh, our Network Engineering and Delivery Manager is working to get Northland customers ready for the future. Raj has been with Northpower since 2008 and has worked in various locations on maintenance and new build projects. But his latest challenge is leading our Network Engineering and Delivery team where he's making a real difference to our customers while at the same time growing his career. He now leads the delivery of our capital and maintenance work programmes, overseeing the engineering aspects of the multi-million dollar investments we're making to get our networks resilient and ready for the growth coming our way. Raj is relishing the challenges his new role brings, saying

**"it's really satisfying providing a safe and reliable electricity supply for our customers – and at the same time designing a network that's capable of meeting requirements of new technology and customer experience in the future".**

### Andrew Camuso (Graduate) Network Engineer, Whangarei

Andrew Camuso works for Northpower's Network Planning team in Whangarei. He is heavily involved in the creation of Northpower's 10-year plan by analysing load trending and identifying current and forthcoming constraints with security of supply, capacity of the network or reliability of assets. Andrew also develops and maintains network contingency plans to provide duty engineers with the adequate information for fault scenarios. Andrew began his career at Northpower in 2017 as an Electrical Engineering intern and spent his time working throughout the business, which helped him to quickly gain knowledge of how the industry operates. In 2018, Andrew graduated from Auckland University of Technology and was hired as an Electrical Engineer Graduate working as a key member within the Network Planning Team.

**"I'm proud to work as a Network Engineer for Northpower. It gives me a great deal of satisfaction to know that my work is helping pave the way for a Safe and Reliable network for the Whangarei and Kaipara District".**

### Kashani Sharma Design Estimator, Auckland

Kashani Sharma has been working with Northpower since 2013 and has developed a varied body of work, working across the company's two distinct divisions- Network and Contracting. Her first role as a graduate engineer at the network office in Whangarei gave her the opportunity to work on unique and exciting projects including the install of NZ's first ever rapid charger for electric vehicles. She continued to pursue her interest in the 'new technologies' space by accepting a role with our Auckland contracting division where she was involved with the 'Sustainable zone substation project', installing Tesla's ground-breaking battery technology 'Powerwall' at zone substations. Currently, she enjoys her role as a Design Estimator providing design and pricing services for the maintenance of Auckland network's ground mounted electricity assets. She says,

**"My journey working across Northpower's diverse business has not only been exciting but very rewarding in terms of my professional growth and personal development".**

## Check out our open roles or send in an expression of interest

Northpower is one of New Zealand's most innovative electricity and fibre communications businesses. Safety, team, trust and accountability are the core values that underpin the culture at Northpower. People thrive because of the tight team spirit and ability to advance through on-going training and study.
